

Create

1. Generates 1,008 functions (ciphertext, same as Authorship) and holds in RAM.
2. Generates 505 numbers using those functions.

3. Creates file "Representing".
4. Creates files "Hypership.number" and "Number_backup" (exact copy of number file, updated.)

Modify

1. Gets event_cycle value from file "Number_backup".
2. if(event_cycle == 0)
 1. Creates new number data and holds in RAM.
 2. Moves select items from file "Representing" to file "Publishing" so as to represent new number in RAM.
 3. Overwrites file "Representing" with number data in RAM.
3. Creates file "Hypership.public" using 1 line from file "Publishing" based on event_cycle.
4. Verifies using files "Hypership.public" and "Number_backup", updating file "Number_backup".
